DETAILED ACTION

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because of a replete use of the term "means" (i.e., lines 2, 5, 6 and 7). Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown '631 in view of Griffin '166. Brown discloses a trenching machine (figures 1-10) having a wheeled frame (generally 2), a first motor means 18 mounted on the frame (as seen in figure 1) and a digging chain 106 driven by the first motor means and supported by a chain guide 100 for pivotal movement (via 140) about a horizontal axis (as seen in figures 1 and 2). Further, Brown shows the machine having a locking means (140) to limit the pivotal movement as well as the use of a plurality of parallel and coaxial shafts and pulleys (as seen in figures 4-6) for driving respective features of the machine but fails to show the use of a second motor means. However, Griffin teaches that it is well known in the art to provide an earthworking device with separate and distinct motor means (as seen in figure 1, reference numerals 20 and 52). Further, Griffin teaches that it is well known to provide a first motor means 20 for driving the earthworking tool 18 and a separate and distinct second motor means 52 to drive at least one of the ground wheels 54. It would have been obvious to one having ordinary skill in the art at the time of the invention to provide the machine of Brown with the teachings of Griffin in order to provide and trencher which would have independent power sources and thus not susceptible to cross power drains.
